A few trees were downed along Arkansas 1 in Watson.

A warm front moved north through parts of southern and central Arkansas. This allowed temperatures to rise into the lower to mid 70s across central and southern Arkansas, while the dewpoints rose into the lower 60s. An upper level system dragged a cold front through the destabilized air and allowed for severe hail and severe winds across central and western Arkansas.

Power poles were broken and power lines were blown down by a severe thunderstorm between Stuttgart and Ulm, AR (Arkansas County) on the afternoon of February 1, 2012. Photo by John Robinson, WCM, WFO Little Rock.
